

Practice Sheet #5
Description

Target Skill: changing ratios to percents. Pre-skills are knowing how to set up the division problem and being able to divide and subtract, knowing how to change a decimal into a percent., and knowing how to round to the nearest percent.

Grade Level: middle to end of fifth grade

Time Limit: The student will be given one minute to try and complete the sheet (although I know we do not want them to). I decided to give one minute due to the amount of work that one problem requires.
